

Business Intelligence and the PMA

Driving Performance Improvement

Nancy Williams

Vice President, DecisionPath Consulting

15th Annual Government Financial Management Conference

Bethesda, MD 2005

BI, DW, and Performance Management

Introduction

- What is Business Intelligence?
 - Business information
 - Business analyses
 - Structured decision-making
- What is a Data Warehouse?
 - Integrated, historical information about business performance
 - It's the “plumbing” that enables business intelligence.
- BI and DW are about Performance Management

BI, DW, and the PMA

Background

- PMA reinforces legislation and regulations aimed at government performance management and improvement:

- GPRA,
- GMRA,
- CFO Act,
- FFMIA,
- JFMIP,
- FASAB SFFAS No. 4,

In a survey of government business and technical professionals, respondents were asked to ***choose which issues were driving their BI/DW initiatives:***

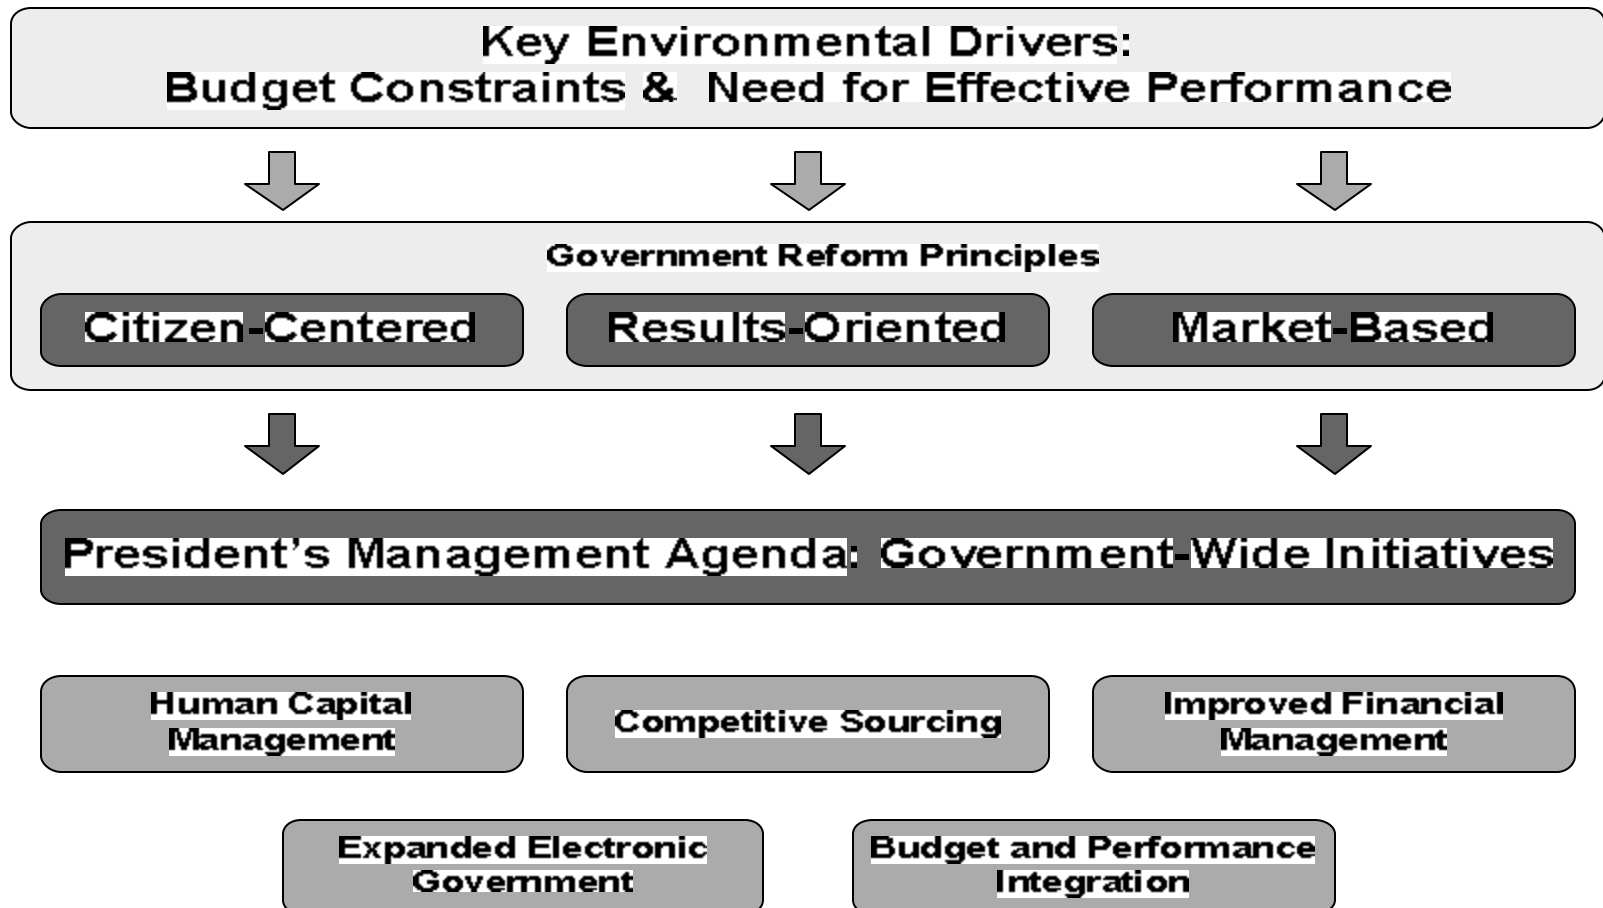

- 51.4% - Improved Financial Performance
- 48.6% - Budget & Performance Integration
- 40.0% - GPRA
- 40.0% - Expanded Electronic Government

BI, DW, and the PMA

Key PMA Objectives

BI, DW, and the PMA

Key PMA Enablers

BI, DW, and the PMA

The Business Case

Improving Government Performance: Information, Analyses, and Decision Support

Citizen-Centered

Service to citizens metrics and trend analyses; citizen survey results over time; scorecards for service to citizens initiatives

Results-Oriented

GPRA and PART data over time; program improvement metrics – outputs and outcomes; productivity metrics

Market-Based

Full cost of agency service delivery and/or outputs; cost trends overtime; comparative costs with private industry

Human Capital Management

Trend data about numbers of management vs. front-line positions; trends data about hiring cycle times

Competitive Sourcing

Full cost of agency service delivery and/or outputs; cost trends overtime; comparative costs with private industry

Improved Financial Management

Trend data re erroneous payments; financial performance metrics; integrated financial and performance data; cost data

Expanded Electronic Government

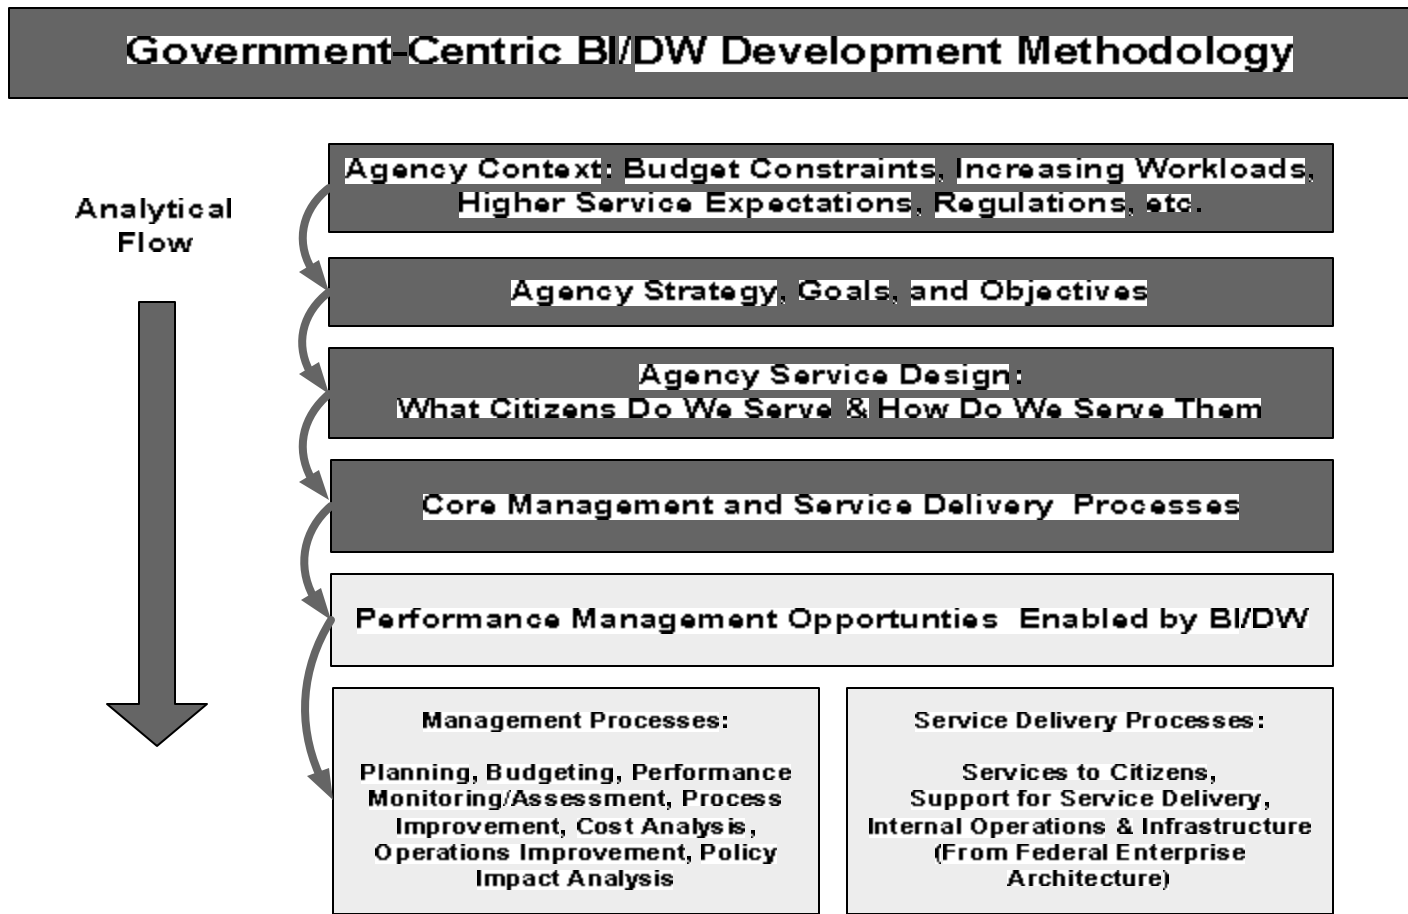

Operating cost trends; citizen service trends; process improvement metrics

Budget and Performance Integration

Program performance and cost trends; scorecards for performance improvement initiatives; PART results

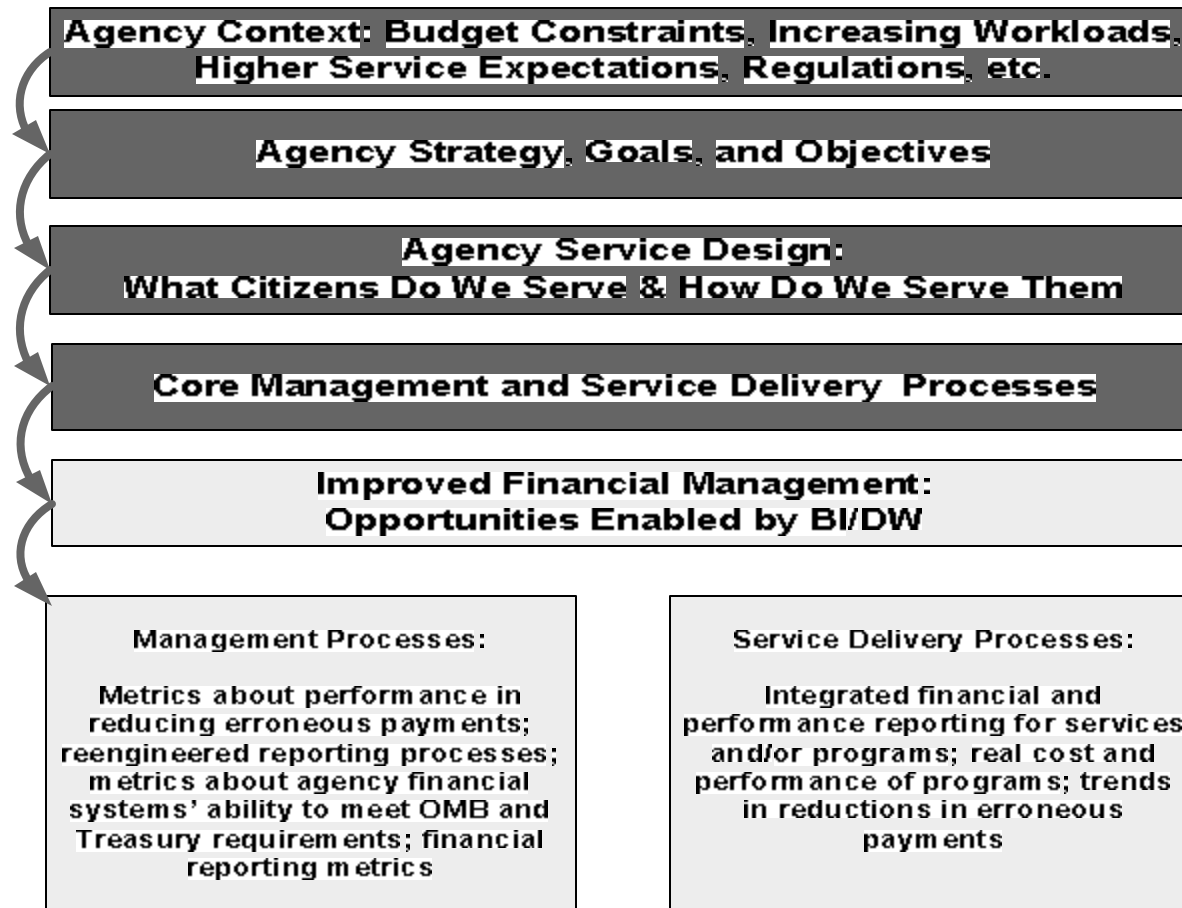

BI/DW Methodology & the PMA

Better Methods for Better Results

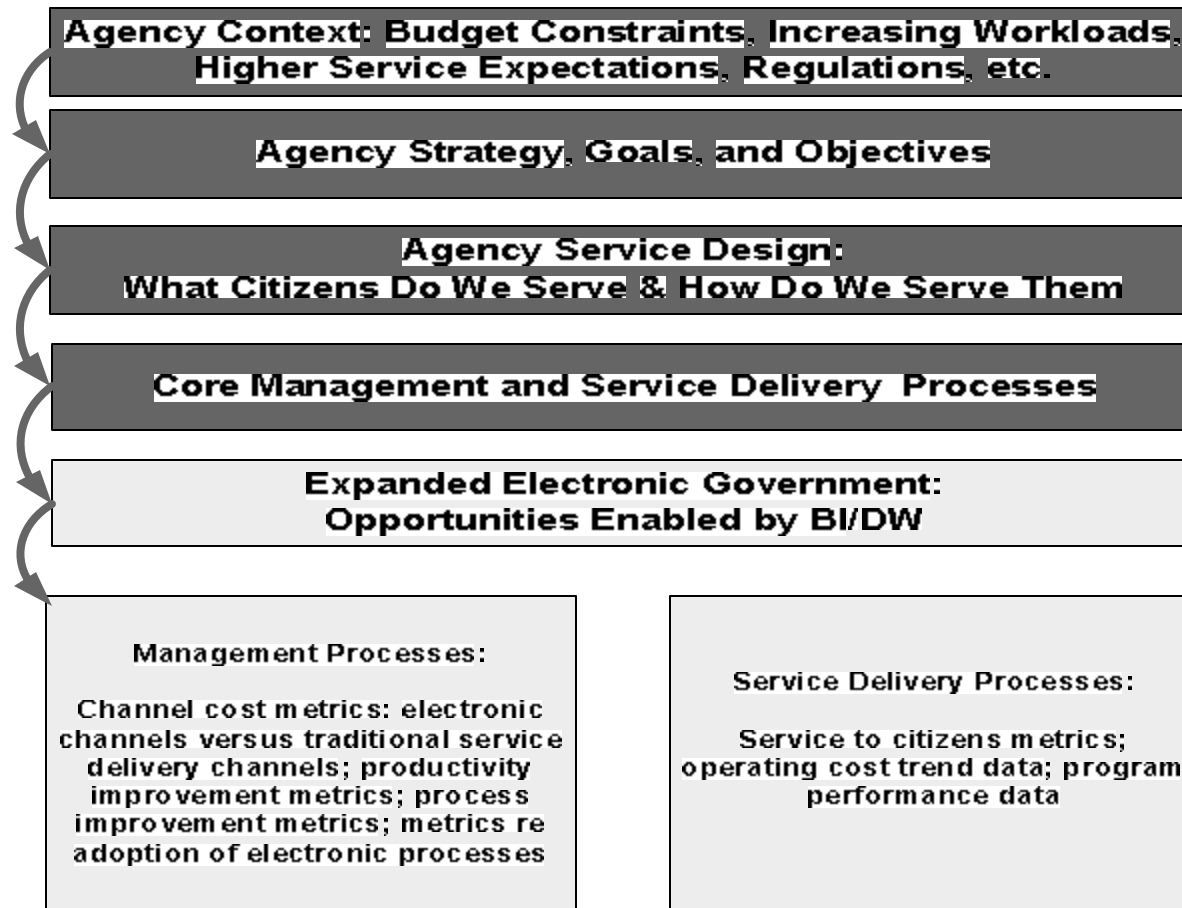

BI, DW, and the PMA

Improved Financial Management

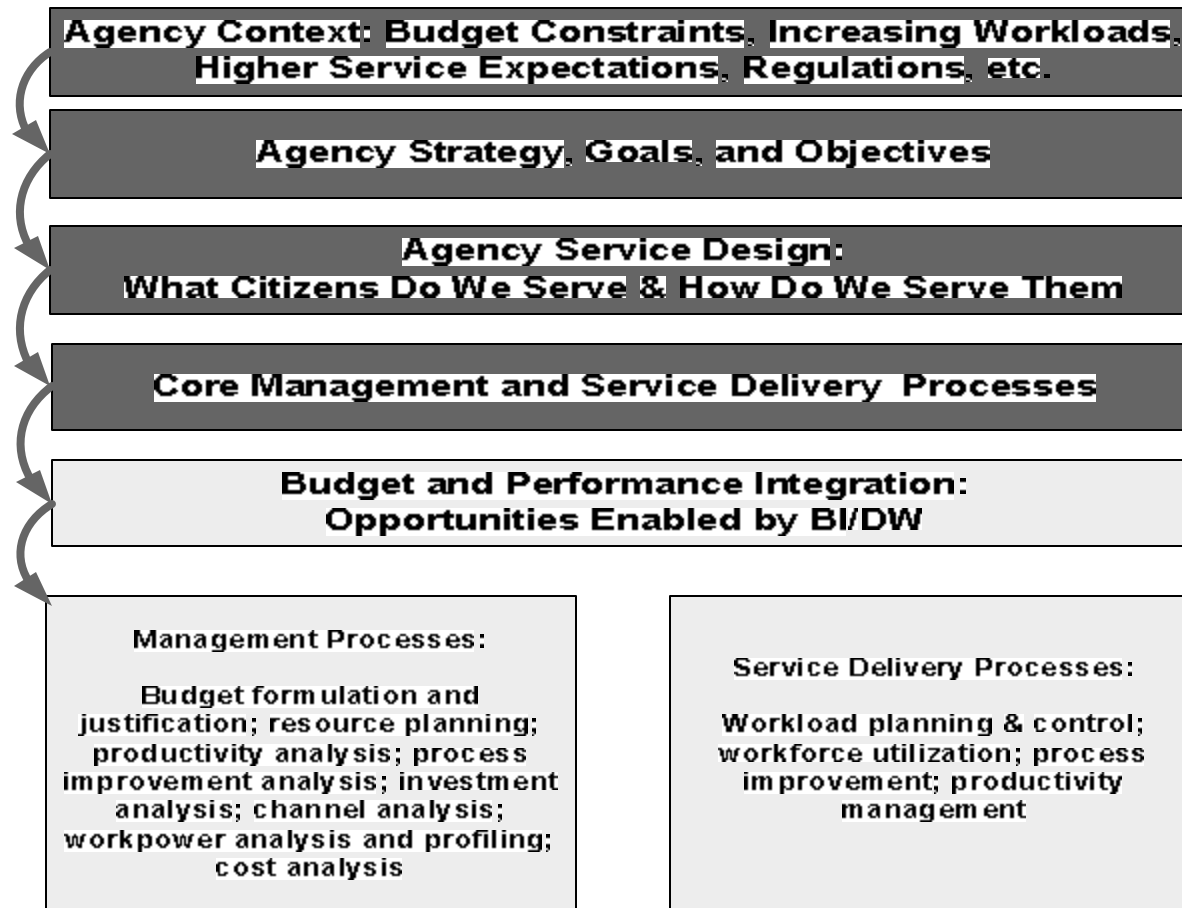

BI, DW, and the PMA

Expanded Electronic Government

Formulating a Roadmap

Time-Boxed Iterative Releases

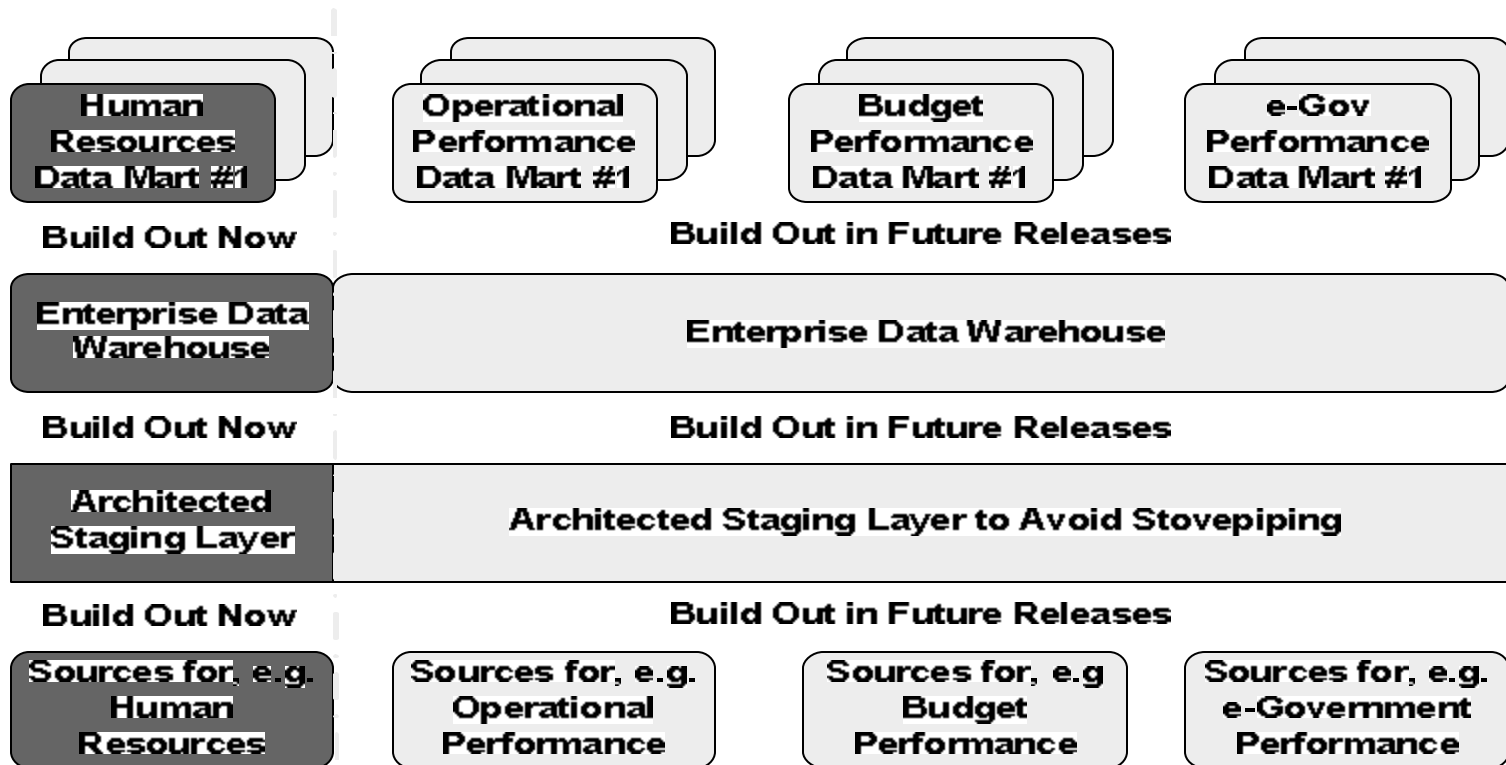

BI, DW & the PMA

Formulating a Roadmap

BI Requirements:

Business Information, Business Analytical Tools, Business Decisions

????????????????????????????????????

BI, DW & the PMA

Common Roadblocks to Success

- Lack of business-driven strategic vision and roadmap
- Underinvestment in requirements
- Legacy IT systems vs BI/DW methods and approaches
- IT resistance to technical change
- Business resistance to process change
- Data integration challenges

BI, DW, and the PMA

Summary

- Improved government performance requires better information, analytical tools, and decision support tools
- BI and DW are the appropriate technologies in many cases
- Government-centric BI/DW development methodologies work
